**You have been identified as a customer
with an indoor natural gas meter.
Learn more on other side.**

CenterPoint Energy and our regulators have worked together on a plan to relocate all residential natural gas meters from inside to outside. Relocation of meters is currently estimated to be completed by the end of 2027. The relocation of natural gas meters outside allows for easier maintenance in the future and a quicker shutoff in case of emergencies.

No action is needed. We will schedule moves in specific areas each year and will provide schedule details before work starts at your home.

Appointments can be requested but will depend on weather and availability of crews. Routine relocation efforts will be at no cost to residential customers, but costs could apply for special requests.

Thank you for your patience as we work to continue to provide you with safe and reliable service.
